

Teaching Space that runs the width of the room by the mirror
It is 7' deep

Each square is 10' x 10'
– total of 8 dancers max
in the space

For both Studios – 8 students max with 10' x 10' squares for the students to move in – if the barres are in the center of the square and the dancers are at the end of the barre – they will maintain the 10' distance while dancing at the barre

The front of the studio is 7' deep that provides space for the teacher to demonstrate in and give corrections from while students are dancing – since it is the width of the room they will be able to change location as need for correction and feedback.

This area ranges from 7' – 0' in depth due to the odd shape of the studio. This does give a min. of 6' for the accompanist in the alcove and a walkway between studios and a place to store the barres

There is space in the back of the studio for the accompanist to play in the alcove areas – they should have plexi glass screens since it is not 10' from the dancers space.

This back area can be divided as well for storage for dancers bag's during class
